

Tech 2000 E-Learning: Customized to meet your needs

❖ EXTENSIVE EXPERIENCE WITH LMS/LCMS INTEGRATION

Tech 2000 has successfully completed numerous LMS/LCMS Integrations. As a result, we have attained a wealth of experience integrating SCORM and non-SCORM content into Large Scale e-learning offerings. These integrations included the use of our own Custom e-learning environment known as "Pathways" as well as integration into existing LMS/LCMS environments such as THINQ, OutStart, Blackboard, Saba, Intellinex, etc. Our team has extensive experience in AICC and SCORM inter/intra system messaging and requirements. We are poised to guide you down a safe and effective path to distribute and manage your e-learning.

Tech 2000's own unique LMS/LCMS solution can provide you with advanced e-learning capability that will support Prescriptive Remediation, Large Scale student tracking, Object Launchable training, and full AICC/SCORM compliance. Our e-learning service is offered both as an ASP and user-owned offering.

Above is a sample of Tech 2000's e-learning developed and implemented for the Navy's Antiterrorism Force Protection Warfare Development Center. The content is SCORM 1.2 compliant and integrated into the Navy's Thing LMS platform.

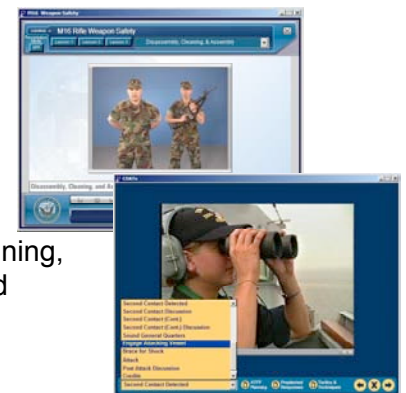

❖ EXPERIENCE CREATING CUSTOM SIMULATION PRODUCTS

Tech 2000 has extensive experience creating customized e-learning product solutions. We are able to combine our capabilities to solve your business requirements. Using Open Standards and advanced e-learning technology, Tech 2000 can transform your problems into easy-to-use and engaging learning objects.

❖ VIDEO ON DEMAND E-LEARNING

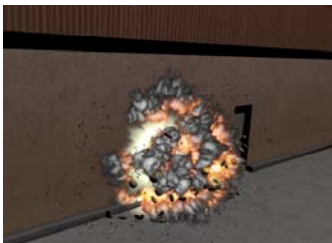

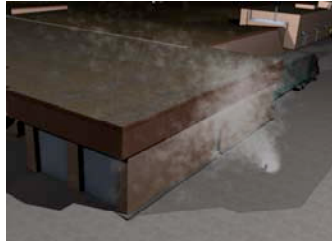

Tech 2000 has created SCORM compliant video based e-learning products. These multimedia scenarios allow students to visually experience decisive conditions. The consequences and remediation of correct and incorrect actions is played out in "Real-time". These products can be used as a capstone exercise in Instructor led training or as a Self-paced learning aid. Tech 2000 has created Decision making scenarios in Armed Sentry Use of Deadly Force, Commanding Officers Anti-terrorism Training, M-16 Weapons Safety, M-9 Weapons Safety, Cisco IP Phone Installation and Operation, and many more.

❖ LEADING-EDGE CLOSE-COMBAT SIMULATOR

Tech 2000 has developed a close-combat simulator for the Department of Energy. The simulator is designed to be used in both a Training and Analysis Role. The simulator known as Analysis, Decision, Evaluation, and Training (ADEPT) is designed to increase the effectiveness of Protective Force Personnel by providing a low-cost, interactive, close-combat virtual “shoot-house”. Features include: scenario creation that maps to the clients actual terrain, buildings, etc.; first-person views; recording for remedial playback; actual weapons characteristics; and more.

The training mode is fully SCORM compliant and can be integrated with any existing LMS/LCMS platform.

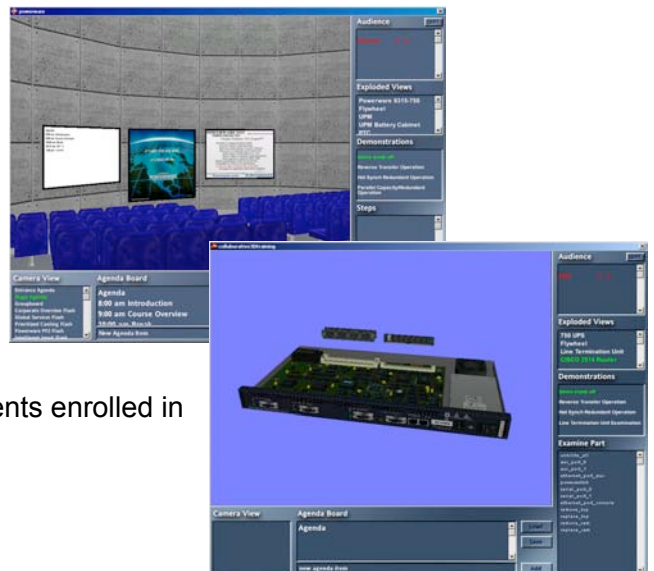

❖ CREATED FIRST CISCO SYNC/ASYNCR 3D E-LEARNING PLATFORM

Tech 2000 has also been recognized for our ability to deliver synchronous and asynchronous Web-based training or e-Learning. Tech 2000 has its own e-learning server that allows the company to push out content and live instruction worldwide.

Tech 2000 has produced a leading edge 3D e-learning training platform known as “3D4M”. 3D4M combines synchronous and asynchronous e-learning delivery into a fully interactive environment.

The company also has the ability to create 24 x 7 remote lab support and online mentoring and “e-coaching” for students enrolled in a Tech 2000 program.
